Abstract

System and method for establishing a remote connection over a network with a personal security device connected to a local client without using a local APDU interface or local cryptography.

CROSS-REFERENCE TO RELATED APPLICATIONS

The present application is related to co-pending U.S. patent applications Ser. Nos.

_____ entitled (OCL-3), "Method and System for Remote Management of Personal Security Devices" and (OCL-2), "Method and System for Authentication Through a Communications Pipe," both filed on April 30, 2001, having the same inventors as those of the present application and assigned to the assignee of the present invention. Applicant hereby incorporates by reference the above-mentioned co-pending applications.
